As a leading international developer and manufacturer, under the slogan of „Hear more, do more and be more“, Jabra offers a comprehensive portfolio of communication and sound solutions that enable users to achieve more. With its two business areas focusing on home and business users, Jabra produces wired and wireless headsets and hands-free solutions that enable more freedom of movement, comfort and functionality in the office and on the move. Jabra employs approximately 1,000 people worldwide and in 2015, had an annual turnover of DKK 3.229 million.

For more information please visit www.jabra.com

CHOOSE THE RIGHT SOLUTION

When your're looking for the perfect headset, there are things you need to consider.

WHERE ARE YOU WORKING?

AT OFFICE DESK

You spend most of your time in the office, at the desk and on the phone.

AROUND THE OFFICE

You spend more time in the office than on the road but you need freedom in the office to perform.

ON THE GO

You spend more time on the move and you need to be able to work from anywhere.

WHAT DO YOU WANT TO CONNECT TO?

You'll need to consider your connectivity needs to make sure your headset solution is compatible with your communication system. You can always contact a Jabra reseller if you need more advice.

TRADITIONAL DESK PHONE

SOFTPHONE/VOIP

MOBILE/SMARTPHONE

TABLET

MULTIPLE DEVICES

HOW NOISY IS YOUR WORK ENVIRONMENT?

Whether it's a little chatter in the background or a colleague sitting right beside you, the right speakers help you get the most out of your calls while the right microphone delivers quality audio on the other end - where it really counts.

LOW NOISE

Omni-directional microphones pick up sound from any direction and block ambient and surrounding noise. Fine for the traditional, low-noise office.

AVERAGE NOISE

Noise canceling microphones and a mono speaker reduce unwanted background noise while ensuring you're still aware of your surroundings. Great for use in noisier, open office environments.

HIGH NOISE

Noise/ultra noise canceling microphones combined with duo speakers filter aggressive noise and can block the sound of someone sitting right beside you. Perfect for very noisy, distracting environments.

WIRELESS OR CORDED?

WIRELESS HEADSET SOLUTIONS

Great if you want to move away from the desk or just a streamlined, cordless headset design.

CORDED HEADSET SOLUTIONS

Perfect if you only work at your desk and you want the best possible audio quality in one or both ears.

Unified Communications by innovaphone

Unified Communications by innovaphone

innovaphone PBX: VoIP telephone system for modern IP telephony in companies

The innovaphone PBX is a powerful and sophisticated VoIP telephone system for use in professional business environments. In addition to a wide range of IP telephony functionalities, the innovaphone PBX is also equipped with a perfectly integrated Unified Communications solution that can be enabled as needed at any time and at any workspace. A server is superfluous. The innovaphone PBX works on diverse innovaphone VoIP gateways, which are available in different dimensions.

PURE IP-COMMUNICATIONS

NEW WAYS OF WORKING: IT ALL DEPENDS ON THE CONVERSATION

ARE UNIFIED COMMUNICATIONS A MIRACLE PRODUCT?

With the introduction of Unified Communications (UC), companies attempted to increase productivity of their staff members and reduce costs at the same time. Cutting-edge technologies and products should support users in their work, anytime and virtually anywhere.

But instead of the desired productivity, staff members and companies soon face a new challenge: the lack of acceptance of UC. This had an impact on a company's most important asset: the Knowledge Worker.

More than ever, companies need to create a positive user experience. This is achieved with well-designed and intuitively operable products that have been designed

with the user in mind. Professional sound solutions play a key role: almost 60% of IT decision makers see suitable headsets as the decisive factor for user acceptance of UC.* Only when staff members also use UC solutions does the investment pay for itself; the company achieves the desired "return on investment" and remains competitive. At the same time, new work forms develop: companies distance themselves increasingly from the traditional office and begin to implement new ways of working.

65% of staff members expect that their company will change into a fully virtual operation before 2016.

* Frost & Sullivan 2012

IT ALL DEPENDS ON THE CONVERSATION

New ways of working require new ways of communication: open collaborative platforms help to collect information faster and to acquire knowledge faster. The basis for this new culture of open cooperation is the conversation. As communications experts, we know what's important for a good conversation: quality. The first impression counts, which is why for many years, we at Jabra have invested consistently in the research and development of new technologies and put our sound solutions through their paces in our own acoustics laboratories. The results are countless product innovations and developments of industry firsts; for example, our Jabra Evolve 80, the first office headset with active noise cancellation, the Jabra

Stealth UC with innovative micro-power technology and the optimized Jabra BIZ 2400 II with the sector's best microphone technology.

As part of GN, we have nearly 150 years of experience with the human ear and how it works. We offer the most comprehensive portfolio of professional wired and wireless sound solutions for all application scenarios, all well-known Fortune 100 companies use our solutions and in close cooperation with all renowned strategic partners, we are continuously improving our products so that you can focus on one thing: your conversation.

UC MOBILE WORKER PRODUCTIVE WORK: ONLY IN THE OFFICE?

The millennials are the embodiment of mobile workers: freedom and the flexible choice of workplace mean so much to them because only with these can they fully develop intellectually and deliver maximum productivity.

PERMANENT WORKPLACES AND RIGID OFFICE HOURS ARE OUT!

Generation M welcomes constant accessibility, multi-channel and multi-tasking communications solutions; they define their work not from their office or their desk, but work anywhere using mobile devices. The mobile multi-tasking generation is accustomed to seamlessly switch between different locations, telephony devices and communication platforms.

Matching devices are therefore an important aspect for mobile workers, in order to be able to work as they wish. Furthermore, Generation M has a strong influence on the devices that they use for their work.

The yearning for freedom of the mobile worker expresses itself in changing networks that must replace the classic

rigid hierarchies within the company, so that they feel comfortable. It is therefore not surprising that members of Generation M are impressive networkers. With the rise of digital social networks, they or their contacts become multipliers. Therefore, the millennials search for networks and not workplaces. Companies can start exactly at this point: with a special workspace, they can offer mobile workers the basis for an expansion of networks.

To help millennials and companies come together, companies should say goodbye to the old ways of working and begin to live the New Ways of Working—it's well worth it!

HOW COMPANIES CAN SUPPORT MOBILE WORKERS

So what can companies do to support mobile workers in their work? The answer is surprisingly simple: Let staff members work as they want!

INNOVATIVE SOUND SOLUTIONS ARE KEY TECHNOLOGIES FOR THE NEW WAYS OF WORKING

With the latest generation of headset models, staff members decide whether they want to communicate or work in a concentrated fashion in a coffee shop or at the airport, simply because they can. For this, premium models like the Jabra Evolve 80 integrate active noise cancellation and can be used almost universally with a USB connector and a 3.5 mm jack plug. In addition, solutions from the latest generation with dual and triple connectivity support mobile workers in their lifestyle: they allow them, wherever they happen to be, to alternate seamlessly between a mobile telephone, a smartphone, a laptop and a fixed line telephone.

The workplace of tomorrow will no longer necessarily be the office. It will be much more defined by the device that is connected to the staff members, with the information and communication platform relevant for them. Instead of insisting on the old therefore, companies should rethink contracted work patterns, such as attendance requirements. As a Jabra partner, you can support your customers in this process and let them experience the implementation of new ways of productive and mobile working with Jabra solutions.
