innovaphone myApps Conferencing & Home Office

Users have already been able to use audio conferences as well as speaker-based video conferencing (with respective UC licenses) for years now with the innovaphone PBX. With V13r3, this conference turns into a multipoint video conferencing system, fully integrated into your innovaphone solution.

innovaphone users enter the virtual conference room via the Phone app or the Softphone app within my-Apps. External participants will receive an invitation with a calendar entry, weblink and information on dialing in via audio only. The innovaphone web conference provides the ideal platform for working remotely from home, to set up meetings with participants from different companies and locations as well as convenient hosting of online seminars and webinars.

Conferences on-premises or from the cloud – based on the innovaphone PBX, conference rooms can be booked, links and calendar entries can be created and shared with internal and external participants.

The presence status is always accurate – All participants are listed in the Conference app. When entering a conference via the Phone app or Softphone app, the presence status of the participant is displayed.

Conference Web Access – Choose the channel of your choice: Participate in conferences via Phone app, Softphone app, via browser or audio dial-in.

Several rooms per user – every user can create and manage temporary rooms with an own Conference app. Recurring meetings and appointments can be created directly within the app

The importance of data protection – innovaphone Conferencing is based on the own innovaphone PBX of the customer. All innovaphone security mechanisms and protocols are therefore standardly included

What is Required in Order to Use innovaphone Conferencing?

- The innovaphone PBX (IPVA, innovaphone gateways or innovaphone myApps Cloud)
- Port licenses for each internal user
- Hardware channel licenses or PBX channel license for each user in a conference (60 participants max.)
- Phone app or Softphone app with video license (alternatively UC license incl. video)
- UC license for each conference object
- Conference app
