

Work Remotely from Home with innovaphone

innovaphone

communicate. connect. collaborate.

The coronavirus crisis is currently affecting our personal and professional lives tremendously. Many employers are looking for solutions to protect the health of their employees. Working environments that allow employees to remotely work from home and that are easily set up are rapidly gaining in importance. innovaphone offers precisely such a solution for businesses of all sizes.

Working from Home – without Limitations

The innovaphone PBX IP telephone system and innovaphone myApps, the universal work and communication platform, will allow for daily work to continue as usual.

- Irrespective of the location: Work anywhere and anytime
- Always remain flexible – myApps will adjust to any device you are using, whether it is a desktop computer, laptop, smartphone or a tablet
- Immediately ready for use – you do not need complex VPN infrastructures

The Ideal Solution for Every Company

innovaphone offers the perfect solution for small businesses and medium-sized companies with several branch offices as well as large enterprises.

- Flexibly expandable
- Seamless scalability
- Suitable for businesses of all sizes

Work from Home with Minimal Equipment

To work remotely from home, you will need a telephone (IP phone or Softphone) and a running internet connection. Functionality of our solution always remains the same, whether you opt for an on-premise installation where innovaphone myApps runs on a gateway (hardware or virtualized) or

whether you obtain the innovaphone solution entirely from the cloud so that no hardware is required. You will further always be able to use the versatile telephony functions plus a fully-fledged Unified Communications solution.

Security is Always on Board – also when Working from Home

Various security functionalities and mechanisms are already integrated as a standard into the innovaphone PBX and they are at your disposal free of charge.

- The innovaphone Session Border Controller (SBC) offers reliable protection against attacks from the internet
- The innovaphone Reverse Proxy detects and blocks attacks at an early stage
- Security protocols such as DTLS-SRTP and ICE (STUN + TURN) ensure end-to-end encryption
- Two-factor authentication reliably prevents unauthorized access

Work from Home – also with the Cloud

You can now also get our [innovaphone myApps work and communication platform from the cloud](#). The commercial flexibility and technological ease of our cloud solution allow for the full spectrum of functions of our universal innovaphone myApps work and communication platform without having to make large investments and without having to worry about operation and maintenance.
