

innovaphone Mobility:

Integrating mobile phones in the innovaphone PBX

The innovaphone Mobility solution means that no matter where you are, you can always be reached under the same number, even when you are abroad. The innovaphone PBX can be extended easily by adding a mobility module, which enables mobile phones to be integrated in the telephone system. This makes it possible to be recognised as an internal subscriber on the PBX and means that all of the telephone system's functionalities are always available to you no matter where you are.

It is even easier to take control of communication costs as the IP PBX always sets up mobile phone calls via the landline. A separate server is not required because the Mobility solution is fully integrated in the innovaphone PBX.

innovaphone PBX functionalities

The Mobility functionality is required to fully integrate mobile phones as fully-fledged subscribers in the PBX. The innovaphone myPBX client displays the innovaphone PBX functionalities graphically on the mobile phone and navigates the user conveniently through the menus and the PBX functionalities. These can be configured on the PBX by the myPBX client either using quick dial or via an existing data connection.

In this case the myPBX client is simply opened as a browser application via a web link on the IP PBX. The IP PBX can be reached either via a VPN tunnel or via a secure connection on a public address.

One number for landline and mobile phones: One Number Solution

The sophisticated One Number Concept by innovaphone ensures that all employees have just one single number - externally as well as internally. With the help of the innovaphone Mobility solution, it no longer makes a difference what device or telephone number the Mobility user uses to make his call - the

person being called will only ever see one and the same extension number. The Mobility user can also be reached anywhere on this extension number, regardless of whether he is on company premises or out on the road, located in a foreign country or generally uses his mobile phone as his only phone. Using a mobile phone as an alternative extension can be enabled and disabled in the PBX by time control.

Using Mobility as needed when needed

The user always has the possibility to take or make a call via a traditional phone or a mobile phone. The myPBX client can enable and disable the Mobility functionality in just a few steps. At the same time, the user can select various call diversions by using the slider at the left-hand-side of the messaging area - this also includes the Mobility functionality. All you have to do is enter the desired target mobile number. If the Mobility functionality is enabled, the button is coloured orange. To disable the Mobility functionality, just click on the Mobility button again

Licensing

The Mobility license enables several phones to be used simultaneously as a subscriber on the PBX. One license per user is required. Regarding the Mobility license, one user license is debited as soon as the functionality is configured to one user on the PBX - irrelevant of whether it is used. The Mobility license version must be greater than or the same as the PBX software version being used.

The innovaphone Mobility solution is part of the UC license. This incorporates all innovaphone UC components and is offered at an especially favourable all-inclusive price.

Current languages supported

The innovaphone Mobility solution currently supports the following languages: German, Danish, English, Estonian, Finnish, French, Italian, Croatian, Latvian, Dutch, Norwegian, Polish, Portuguese, Russian, Swedish, Slovenian, Spanish, Czech and Hungarian.
